

CLINICAL IMAGING CASE STUDIES

Interprofessional Online Learning | University of Saskatchewan

Course Overview: This resource will allow you to view X-ray, Computed Tomography (CT), or Ultrasound (US) images pertaining to a unique case. You will be provided with pertinent history, physical, and laboratory findings. Review a series of 12 cases over a period of 1 year displaying X-rays, CT Scans and Ultrasound images and correctly answer a set of relevant questions pertaining to each imaging format for each case. You will be able to access one case each month over a period of one year. Each new case will be released upon successful completion of the previous case with the first case available automatically.

Target Audience: This course is suitable for emergency and family physicians.

Course Learning Objectives: Upon completion of this activity, the learner will be able to:

- Formulate a diagnosis based on their comparison of normal and abnormal images and apply the knowledge acquired to that process after review of supplemental materials included with each case to reinforce learning
- Identify that comparison of abnormal imaging to normal examples is an integral skill that must be incorporated into their interpretation of images to formulate an accurate diagnosis
- Interpret and form an accurate diagnosis for the modalities of plain x-ray, CT and ultrasound
- Recognize the importance clinical history plays in the correct interpretation of an image and the formation of an accurate diagnosis

Course Cost: Complimentary

Registration Opens: March 27, 2020

Online Registration: <https://ccdeconference.usask.ca/index.aspx?cid=328>
